```
nama: fautan Zulfa muhammad (103022900032)
1) perbedaannya terletak pada flowfalur etsekus i
```

```
, For loop: inisias, variabel - pengecetan wondis; neksetus; - what variabel
        - biasa digunakan kehka jumlah steras; variabel sudah ditentukan
     - while do loop: pengecekan kondisi a eksekus; a wodifikas; kandis;
        biasa digunakan ketika memerlukan kondisi tertentu tenpa
          Jumiah pasti Tterasi, dan loop akan berjalan ketika bondis. true
     · do while loop : elsekus: > pengecelan kondis; > ulang; sika kondis; true
        - Ester mirip seporti while do loop tapi kode sudah pasti teretsetus;
@ public class main {
      public static void main (String[] args) {
          int result;
          For (int i = 1; i < 10; i++) }
              result = 3 # i;
              System - out. print ("3 * "led = "led"/-n", i, result);
           3
```

3 3 import java atil. Scanger public class main } public static void main (String [] args) } Scanner input = new Scanner (System.in) } int user Input = input.nex + In+(): input . close () : For (inti=0; i & user Input; i++) { for (inf n 20 ; n < i; n + +) } System . out . print ("*"); 3 System. out . println(); 3 3

```
a public class main {

public static void main (String[] args) {

int total = 0;

double average = 0;

For (int i=0; i (2x00); i++) {

total += i;

if (i== 600) {

oucrage = total / 600.0;

}

System.out - print = ("Total: "Gd /LnKata-rata: 76-15", total, average);

}
```
